#### TPSMG TOR 001

There are no known conditions that would change the data restrictions for, or security classification of, this publication.

To be made available to all Steamy Rollers customers.

Export of this publication to all countries that are the residence of organizations that are users of S1000D is permitted.

There are no dissemination limitations that apply to this publication.

Users may destroy this publication in accordance with any local procedures.

There are no dissemination limlitations that apply to this publication.

#### Notice to the reader:

This publication includes highly sophisticated stuff. Read it with:

- reflection
- pride

#### Manufactor's information:

Steamy Rollers is a well-reputed heavy vehicle manufacturer famous for its reliable steamrollers. However, if something goes wrong, don't blame us.

Any complaint shall be sent to:

- AECME Steamroller Distributors, Poste Restante, Somewhere City, Utopia
- Steamy Rollers, Off Road 66, Noway, Atlantis

### Configuration

### 1 Product configuration

The product configuration shows current, associated, and historical product information for the end item part numbers contained in this publication. The products are listed byb PN class, which are defined as follows:

- "PRIME" The PRIME is the current OEM's top-level part number and MFR code covered by this publication.
- "ALT" The ALT represents an alternative to the PRIME for the same part. For example, this could be an airframe manufacturer's part number.
- "PREV" The PREV represents a legacy part number and MFR code to the PRIME for the same part number that may still be supported.
- "OBS" The OBS represents a part number and MFR code that is no longer supported but is included in this publication for historical reference.

Refer to the "List of suppliers" for MFR information.

Table 1 Product configuration

PN class	PN	MFR	Component name	Model
PRIME	123-1111	ZZZZZ	Product Five	
ALT	Z555-ZZZZ-55	ZZZZZ	Product Five	
ALT	R555-RRRR-55	RRRR	Product Five	
PREV	A555-5555-55	AAAAA		Model Five

### 2 Publication configuration

The publication configuration shows active or superseded configuration information about this publication. The publications are listed by Pub class, which are defined as follows:

- "PRIME" The PRIME represents the active publication.
- "PREV" The PREV represents the legacy publication to the PRIME publication.

Refer to the "List of suppliers" for MFR information.

Table 2 Publication configuration

Pub class	SNS/ATA	MFR	Publication number	Issue/Rev
PRIME	23-10-10	55555	CMMST-ZZZZZ-00001-00	Current
PREV	23-00-10	ZZZZZ		018

### Administrative and legal statements

#### 1 **Documeering Limited Product License Agreement**

IMPORTANT - PLEASE READ THIS ENTIRE AGREEMENT CAREFULLY BEFORE USING THIS DOCUMENT.

YOU AGREE TO BE BOUND BY THE TERMS OF, AND BECOME PARTY TO, THIS AGREEMENT. THIS AGREEMENT IS APPLICABLE TO THE ACCOMPANYING MARCHANDISE (THE "MERCHANDISE"), THE INFORMATION RESIDING THEREON OR ON THE INTERNET WEB SITES ACCESSIBLE EXCLUSIVELY VIA LINKS FROM THE MERCHANDISE (THE "CONTENT") AND THE RELATED SOFTWARE (COLLECTIVELY, THE "LICENSED PRODUCT"). IF YOU DO NOT AGREE TO BE BOUND BY THE TERMS OF, AND BECOME PARTY TO, THIS AGREEMENT, YOU CANNOT USE ANY PART OF THIS DOCUMENT AND CANNOT SHARE IT WITH OR FORWARD IT TO ANY OTHER PERSON OR ENTITY.

#### 2 Important information

The Product contains specifications, practices and other information relating to the covered topics. Docuneering Ltd does not mandate the use of all or any part of the Licensed Product and your decision to use the Licensed Product is entirely voluntary, your decision and at your own risk. You may choose to use the Content is whole, in part or not at all.

There may be practices, standards and/or governmental requirements applicable to your operations that exceed, or vary from, the Licensed Product. You are solely responsible for determining of such practices, standards of regulatory requirements exist and whether they apply to your activities and for complying with these that are applicable. Such practices, standards and regulatory requirements can change significantly over time. Unless Docuneering Ltd expressly states otherwise in writing, nothing in this Agreement shall be interpreted as requiring Docuneering Ltd to provide you with updates, revisions or information about any development or action affecting the Licensed Product.

The Licensed Product has been compiled by Docuneering Ltd and/or its licensors. Docuneering Ltd and/or its licensors reserve title to and ownership of the Licensed Product and all copyrights and any other intellectual rights in it.

#### 3 Description of license

Upon your acceptance of this Agreement, you will be permitted to access the information for which you have obtained the license described and limited below...

Applicable to: All

### Issue 002

The listed changes are included in issue 002, dated 2023-02-01, of this publication.

Data module code	Reason for update
S1000DBIKE-AAA-D00-00-00-00AA-00TA-A	Up issue to 002
S1000DBIKE-AAA-D00-00-00-00AA-00PA-D	S1000D upissued
S1000DBIKE-AAA-D00-00-00-00AA-00QA-D	S1000D upissued
S1000DBIKE-AAA-D00-00-00-00AA-00WA-D	S1000D upissued
	Add a security attribute to dmTitle elements techName and infoName
S1000DBIKE-AAA-D00-00-00-00AA-00XA-A	S1000D upissued
S1000DBIKE-AAA-D00-00-00-00AA-022A-D	S1000D upissued
	Explain-unassigned-BREX-flag-value
	2009-043IGBRTT
	Added defaultBrSeverityLevel and brSeverityLevel.
	2009-123IGBRTT
	Editorial: Added Unique IDs to each Bike BREX rule.
	Editorial: Corrected typing errors and name inconsistencies in BIKE-BR-00037, BIKE-BR-00040, BIKE-BR-00046, BIKE-BR-00056, and BIKE-BR-00069.

### General information

#### Introduction 1

The following table(s) and illustration(s) provide the description and use of the controls and indicators pertaining to the mountain bicycle(s). Some controls and indicators may differ depending on the model.

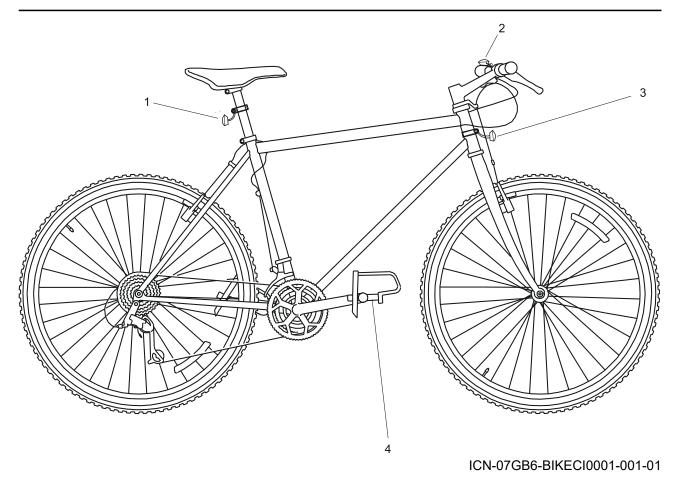

Fig 1 Bicycle Controls and Indicators

## Controls and indicators repository

## 1 Control or indicator group

References: Fig 1

#### 1.1 ci-0001

#### Description

Control or indicator functions:

- Lights illuminate automatically when brakes are engaged.

4	7	_	•	n	n	V A	•	,
		-					_	۰
	.2	•	•	-0	v	•	_	

Name: ...... Chrome Bell

Description

Control or indicator functions:

Press to sound bell. Normally used to signal a need for attention.

#### 1.3 ci-0003

Name:.....LED Headlight

Description

Control or indicator functions:

Push button to turn light on or off.

#### 1.4 ci-0004

Key:..... 4

Name:...... Platform Pedals

#### Description

Control or indicator functions:

- Control the acceleration of the bicycle.

### General information

### Introduction to the Bike BREX DM

The Bike BREX data module has primarily been developed to

- serve as an example of how a BREX data module is meant to be used
- to control and guide the continuous development of the Bike data set

The Bike BREX will be subject of continuous enhancements to ensure that each new specification issue is appropriately represented in the BREX module.

## Description

# 1 Physical description of a bicycle

A bicycle (refer to Fig 1) is a frame and a number of movable components with mechanical parts that are completely open. There are no covers or sheet metal panels that prevent access to the mechanical parts. Thus, you can disassemble the different components of a bicycle (refer to Fig 1 [0]) to do:

- an inspection
- a maintenance task
- a repair task

ICN-C0419-S1000D0360-001-01

Fig 1 Complete bicycle

The parts that you can immediately identify on a bicycle are given in Table 2.

Table 2 Bicycle parts

Item	Refer to	Definition	
Frame	Fig 1 [9]	A bicycle frame is made of metal tubes that are welded together.	
Wheels		The wheels include these parts:	
		<ul><li>Hub</li><li>Spokes</li><li>Metal rim</li><li>Rubber tire</li></ul>	

### Table 2 Bicycle parts (Continued)

Item	Refer to	Definition	
- Rear wheel	Fig 1 [7]		
- Front wheel	Fig 1 [3]		
Seat and seat post	Fig 1 [8]	These install into the seat tube with a mechanism you can use to change the height.	
Handle bars	Fig 1 [11]	A horizontal bar that attaches to the stem with grips at the ends that attach to the brake levers and the shifters.	
Handle bar stem	Fig 1 [10]	This attaches the handle bar to the steering tube (head set).	
Cranks	Fig 1 [5]	A lever that extends from the bottom of the bracket to the pedal.	
Pedals	Fig 1 [4]	The two platforms for the feet that attach to the crank.	
Chain	Fig 1 [6]	A circular set of links that connect the chain ring to the cogs on the freewheel.	
Gears	Fig 1 [2]	The gears include:	
		<ul> <li>Front chain ring</li> <li>Rear freewheel</li> <li>Front and the rear derailleur</li> <li>Shift lever on the handle bars</li> <li>Cables</li> </ul>	
Brakes	Fig 1 [1]	The brakes include:	
		<ul><li>Actuators on the handlebars</li><li>Brake cable</li><li>Brake callipers</li><li>Brake pads</li></ul>

## **Description**

## 1 Functional description of a bicycle

Below is a list of the different bicycle components and a functional description of them.

Frame

The frame is the skeleton of the bicycle. Refer to \$1000DBIKE-AAA-DA3-00-00-00AA-041A-A for a functional description of the frame system.

Wheel The wheel is the point of contact between the bicycle and the

> road for the bicycle to have movement. Refer to \$1000DBIKE-AAA-DA0-00-00AA-041A-A for a functional description of the

wheel.

**Spokes** The spokes are thick wires with tension applied that connect the

hub to the rim. You can adjust the tension with the nipple on the

rim side.

Hub The hub attaches to the center of the wheel where the axle and

the bearings are.

Metal rim The metal rim is a metal ring that has a U-shaped cross section

to hold the spokes on the inner side and the tire on the outer

side.

Seat The seat, which is also known as the "saddle", is used as the

support platform for the person to sit on the bicycle.

Seat post The seat post is used as a support post for the seat and to

change the height of the seat for the rider.

Handle bar The handle bar is a horizontal bar with handles on each end.

> The handle bar is a steering mechanism that the rider uses to change the direction of the bicycle. The brake levers are also on the handle bar. Refer to S1000DBIKE-AAA-DA2-20-00-00AA-720A-A for information on how to install the handle bar. Refer to S1000DBIKE-AAA-DA2-20-00-00AA-520A-A for information on

removing the handlebar.

Handle bar stem The handle bar stem (the stem) attaches the handle bar to

the steering tube. Refer to \$1000DBIKE-AAA-DA2-10-00-00AA-720A-A for information on how to install a stem. Refer to S1000DBIKE-AAA-DA2-10-00-00AA-520A-A for information on

how to remove the stem.

Brake levers When you operate the brake lever, the brake pads move

> against the wheel to decrease the speed. The brake lever on the left side operates the front brake. The brake lever on the

right side operates the rear brake.

**Brakes** When you operate the brakes, the brake pad moves against

> the wheel to decrease the speed of the bicycle. Refer to S1000DBIKE-AAA-DA1-00-00-00AA-041A-A for a description of

the braking system.

**Shifters** The shifters are the mechanisms that you use to change the

gears on the bicycle. There are 7 different types of shifters that have been developed over the years, but they all have the same functionality. When you operate the shifters, they pull the control cable to move the derailleur towards a larger diameter chain ring. The shifters can also loosen the cable to let the derailleur move towards a smaller diameter chain ring. Refer to S1000DBIKE-AAA-DA5-30-00-00AA-041A-A for a functional

Crank The crank moves the power to the chain rings when the pedals

operate.

Pedals The pedals move the force of movement from the feet to the

cranks.

Chain The chain moves the power from the chain rings to the cogs on

the freewheel. Refer to \$1000DBIKE-AAA-DA4-10-00-00AA-

251B-A for the procedure on how to clean the chain.

Gears The gears have different mechanisms that function together to

change the speed of the bicycle. These mechanisms include:

- the sprockets

- the chain

- the derailleur

Refer to S1000DBIKE-AAA-DA5-00-00-00AA-041A-A for a

functional description of the gear system.

Chain rings The chain rings (also known as the "chain wheel") pull on the

chain when the cranks turn.

Derailleur Moves the chain from one sprocket to another to

change the gears. There are two different types of derailleur, the front and the rear. The highest ratio (highest gear) is when the chain is on the largest sprocket on the front and the smallest at the rear. To get the lowest gear, the smallest sprocket is at the front and the largest at the rear. Refer to \$1000DBIKE-AAA-DA5-10-00-00AA-041A-A for a functional description of the

derailleur system.

### Crew

### 1 Introduction

Data about the bicycle and its control system is given in this document. This data will help you operate the bicycle.

# 2

#### 2.1 Controls

Data about the controls that follow is given in this document:

- Para 2.2
- Para 2.3
- Para 2.4
- Para 2.5

### 2.2 Steering

The handlebars are used to steer the bike. They are at the front of the bicycle. You hold one of the handlebar grips with each hand and move the handle bar to change the direction of the bike.

#### 2.3 Shifters

The gears control the ratio of pedal rotation to wheel rotation. You can change this with the shifters \$1000DBIKE-AAA-DA5-30-00-00AA-041A-A . The shifters are on the handlebar.

A description of the two Table 2 follows.

Table 2 shifter correlation

Shifter Location	Affected Gears
Left	The buttons on the left shifter changes the gears on the front derailleur.
Right	The buttons on the right shifter changes the gears on the rear derailleur.

#### 2.4 Brakes

You can decrease the speed of the bike with the brakes. You operate the brakes with the brake levers on the handlebar.

A description of the Table 3 follows.

Table 3 brake lever correlation

Brake Lever Location	Affected Brake
Left	This lever operates the front brake.
Right	This lever operates the rear brake.

#### 2.5 Pedals

The ci-0004 are at the bottom of the seat tube. You operate the ci-0004 to move the bicycle forward.

## **Safety conditions**

None

### **Procedure**

- 1 Examine the condition of the brakes.
- 1.1 Open the brake quick release.
- 1.2 Examine the condition and the thickness of the brake pads.
- 1.2.1 Make sure that there is a large quantity of rubber left.
- 1.2.2 Make sure that the pad is not too hard.
- 1.3 Clean all the unwanted material.
- 2 Do an inspection of the installation of the brakes.

2.1 Check the hydraulic brake system function.

ICN-C0419-S1000D0384-001-01

Fig 1, Other Hydraulic brake function

Make sure that there is sufficient clearance between the pad and the inner diameter of the brake surface.

2.3

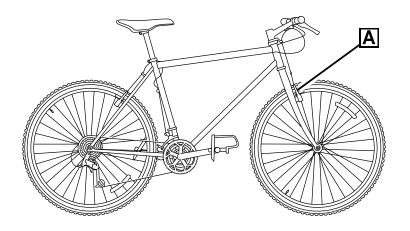

2.2

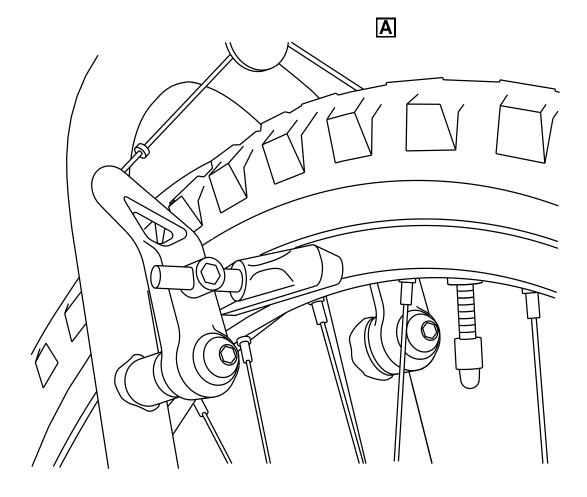

#### **CAUTION**

If the position of the pads is too low on the rim, as shown in Fig 2, the pads can move. This could cause the separation of the spokes from their mountings., they could slip off causing the spokes to be torn out of their mountings.

S1000DBIKE-AAA-D00-00-00-00AA-121A-A

ICN-C0419-S1000D0382-001-01

Fig 2 Brake pad seating

Ľŧq.
Docuneering
Produced by

6.2.2

	Make sure that the pads are correctly installed in the center of the inner diameter of the brake surface.
3	Do a check of the tire pressure.
3.1	Do a check of the tire pressure with the Tire pressure gauge .
3.2	Compare the value you read with the recommended pressure that is shown into the sidewall of the tire.
3.3	Add the necessary air.
4	Examine the condition of the wheels.
4.1	Examine the rims for bulges and dents.
4.2	Examine for splits at the seam where an extruded rim is bonded.
5	Do a check of the headset bearings.
5.1	Straddle the bicycle.
	Apply the front brakes and push the handle bars forward.
5.2	Make sure that the headset bearings are tight.
6	Do the checks on the chain.
6.1	Visually examine the chain.
	If the chain is too dirty, clean it as specified in the clean chain task (refer to \$1000DBIKE-AAA-DA4-10-00-00AA-251B-A ).
6.1.1	Visually examine the chain for links that are frozen or that do not move easily.
6.1.2	Apply the necessary General lubricant .
6.2	Do a check of the chain to make sure that it is tight.
6.2.1	Make sure that the play of the chain is not too much.
6.2.1.1	Move the chain on the largest chain ring.
6.2.1.2	Try to pull the chain away from the front of the chain ring.
	Make sure that the chain is not loose. Tighten the chain if, when you pull it away from the chain ring, you can see a full tooth.

Tighten the chain with the Allen wrench from the Specialist toolset.

### **WARNING**

Do not get Detergent A into your eyes. If it gets into your eyes, wash them immediately in clean warm water.

# Applicable to: Mountain bicycle Brook trekker Mk9

#### **WARNING**

Do not get Detergent C into your eyes. If it gets into your eyes, wash them immediately in clean warm water.

#### **CAUTION**

Do not use a Water hose that has high pressure. A water hose that has high pressure can cause some parts to become loose or full of water.

#### **CAUTION**

Do not point the hose directly at the hub or at the bottom bracket bearings. This can cause damage to the parts.

### Applicable to: Mountain bicycle Brook trekker Mk9

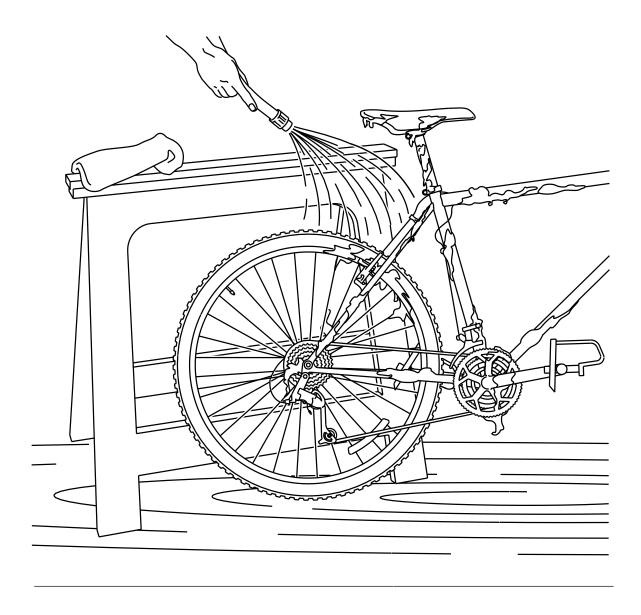

#### **CAUTION**

Apply Detergent C in accordance with the instruction on the container. The substance may cause damage to the Bike paint if it is not applied correctly.

#### **Procedure**

1 Clean the bicycle with water to remove all dirt. Refer to Fig 1.

ICN-C0419-S1000D0359-001-01

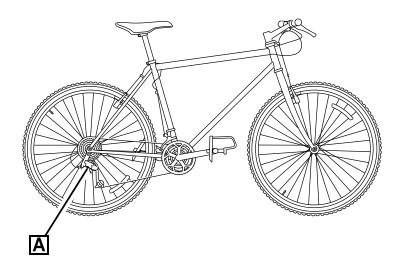

Fig 1 Cleaning the bike

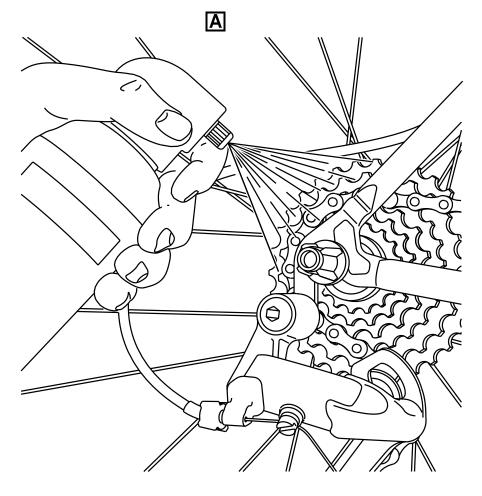

- Use a Stiff bristle brush to get access to areas that are not easy to clean. These are the shift levers, the knobbly tires, and the brakes.
- 3 Clean the caked grime from the chain and the sprockets with a screwdriver that has a small blade.
- 4 Remove the grease from the freewheel assembly with the Degrease agent as shown in Fig 2.

Use a brush to remove the grease from these parts:

- sprockets
- guide and tension wheels of the derailleur
- chain ring teeth

ICN-C0419-S1000D0400-001-01

Inner-tube	Part No. KT222/IT-001	1 EA	

# **Safety conditions**

#### **CAUTION**

When you remove the rear wheel to repair a puncture, disconnect the brake arm from the chain stay.

#### **Procedure**

1 Remove the rear wheel. (Refer to S1000DBIKE-AAA-DA0-20-00-00AA-520A-A)

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

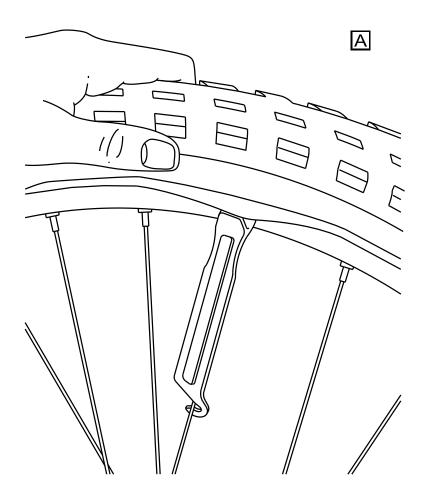

S1000DBIKE-AAA-D00-00-00-00AA-663A-A

- 2 Make sure that there is no air in the tube.
- 2.1 Loosen the cap on the valve stem.
- 2.2 Push the valve stem core down to bleed all the air.
- 3 Use a Tire lever to move the tire bead out of its seat. Lift the tire bead above the lip of the rim.

ICN-C0419-S1000D0368-001-01

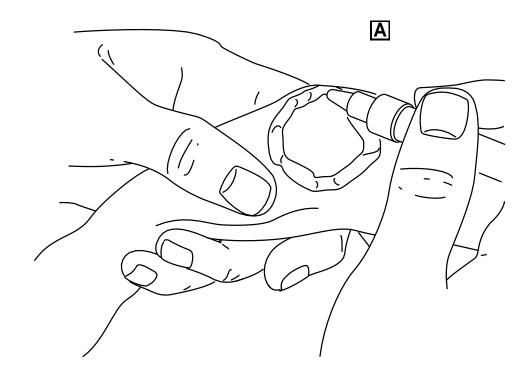

Fig 1 Unseating the tire with a tire lever

- 4 Remove the tube.
- 5 Inflate (not fully) the tube with the Foot pump. Examine the tube for leaks.
- 6 If you find a leak, identify it with a circle made with a Marker pen.

ICN-C0419-S1000D0375-001-01

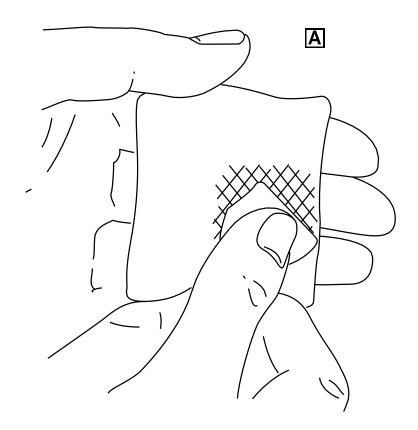

Fig 2 Circle leak

- 7 Release most of the air.
- 8 Use a piece of sandpaper from the Tube patch kit and make the area on and around the hole rough. This will help the patch bond correctly.

ICN-C0419-S1000D0376-001-01

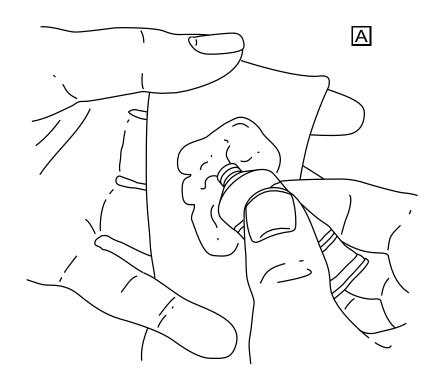

Fig 3 Sanding the application area

Apply a thin layer of glue from the patch kit on and around the hole. Make sure that the area with the glue is larger than the patch.

ICN-C0419-S1000D0377-001-01

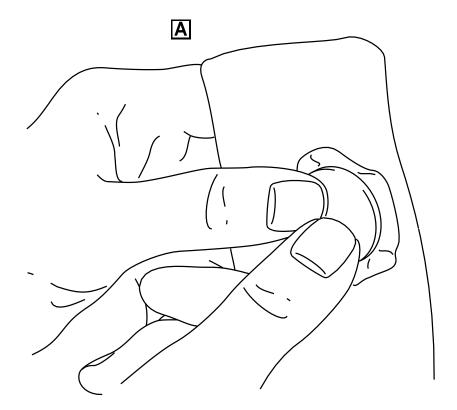

Fig 4 Apply glue to application area

- 10 Let the glue dry for five minutes until it becomes tacky and dim.
- 11 Remove the rear foil from the patch (that is a part of the patch kit) and push the patch in its position.
- Push with your thumbs from the center of the patch to the outer part of the applied area.

ICN-C0419-S1000D0378-001-01

Fig 5 Apply pressure to tube

13	Remove the thin cover from the patch.
14	Put a very thin layer of talcum powder on and around the patch.
15	Inflate (not fully) the repaired tube with the foot pump.
16	Start at the valve stem and install the tube again between the tire and the rim.
17	Push the valve stem through the hole in the rim.
18	Make sure that the valve stem is straight.
19	Install the remaining of the tire.

#### Revision information

## **Revision history**

This document is the first issue of the Service Bulletin

# **Revision sequence**

Original Issue date 2016-08-31

## Summary

#### Reason

A lot of customers asked for the improvement of the front hanging in order to use the bike in more severe conditions.

# **Description**

Replacement of the fork

This is a draft copy of Issue 002-00 Printed 2025-12-12 13:22

S1000DBIKE-AAA-D00-00-01-00AA-930A-A

## Compliance

Compliance: Optional

## **Applicability**

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9) This Service Bulletin is applicable to bikes manufactured between 01/05/2001 and 30/09/2009

Applicable to: Mountain bicycle and Mountain storm Mk1

Configuration no. 1 covers mountain bicycle Mountain storm version Mk1

Applicable to: Mountain bicycle and Brook trekker Mk9

Configuration no. 2 covers mountain bicycle Brook trekker version Mk9

## **Concurrent Requirements**

#### **General evaluation**

EVALUATION TABLE	
Passenger comfort affected	Yes
Structural life extended	Yes

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

#### **EVALUATION TABLE**

Yes

Bike operation affected

## Planning information

## **Applicability**

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)
This Service Bulletin is applicable to bikes manufactured between 01/05/2001 and 30/09/2009

Applicable to: Mountain bicycle and Mountain storm Mk1

The S/N of the impacted bikes are : CAGE: U8025[PN: 1B070701]

Applicable to: Mountain bicycle and Brook trekker Mk9

The S/N of the impacted bikes are:

CAGE: U8025[PN: 1B070643] CAGE: U8025[PN: 1B070644]

Applicable to: Mountain bicycle and Mountain storm Mk1

Configuration no. 1 covers mountain bicycle Mountain storm version Mk1

Applicable to: Mountain bicycle and Brook trekker Mk9

Configuration no. 2 covers mountain bicycle Brook trekker version Mk9

## **Concurrent Requirements**

No Info

#### Reason

- 1 Objective :
- 1.1 Improvement of the bike's front hanging.
- 2 Problem and effect:
- 2.1 A lot of customers would like to use the bike in more severe conditions.
- 3 Solution:
- 3.1 Replacement of the fork.

## **Description**

- 1 Replacement of the original fork
  - Applicable to: Mountain bicycle and Mountain storm Mk1
- 1.1 by telescopic fork with a 140 mm clearance
  - Applicable to: Mountain bicycle and Brook trekker Mk9
- 1.2 by telescopic fork with a 100 mm clearance

# Compliance

#### 1 Compliance

Compliance: Optional

The modification should be made in accordance with the customer's availability, but within the following limits (before marked wear of the frame)

Table 8 Accomplishment time scale

Limit	Grace period	
Basic limit	Grace period	
Limit:	Limit:	
Perform once	Perform periodically	

## **Approval**

This modification has been approved and certified in conformity with the requirements of the S1000D community.

Approval No. S1000D-020AA.

## Manpower

- Fork	Part No. KZ666/FK-TEL1002	1 EA	

### Safety conditions

None

#### **Procedure**

#### 1 PREPARATION

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

1.1 Remove the front wheel, refer to: \$1000DBIKE-AAA-DA0-30-00-00AA-520A-A

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

1.2 Remove the front brakes, refer to: \$1000DBIKE-AAA-DA1-20-00-00AA-520A-A

#### 2 PROCEDURE

**Applicable to:** Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)
2.1 Remove the fork, refer to: S1000DBIKE-AAA-D00-00-01-00AA-520A-A

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

2.2 Change the bike axis, refer to: S1000DBIKE-AAA-D00-00-01-00AA-93AA-A

Applicable to: Mountain bicycle and Mountain storm Mk1

2.3 Install the new fork, refer to: S1000DBIKE-AAA-D00-00-01-00AA-720A-A

Applicable to: Mountain bicycle and Brook trekker Mk9

2.3 Install the new fork, refer to: S1000DBIKE-AAA-D00-00-01-00AB-720A-A

**Applicable to:** Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

2.4 Install the front brakes, refer to: S1000DBIKE-AAA-DA1-20-00-00AA-720A-A

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

2.5 Install the front wheel, refer to: S1000DBIKE-AAA-DA0-30-00-00AA-720A-A

#### 3 TEST

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)
3.1 Test that the fork is properly installed, refer to: S1000DBIKE-AAA-D00-00-01-00AA-341A-A

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)
3.2 Front brakes test, refer to: BRAKE-AAA-DA1-00-00-00AA-341A-A

## Description

### 1 The bicycle wheel

The wheel (refer to Fig 1) of a bicycle is a complex structure. The wheel assembly has these parts:

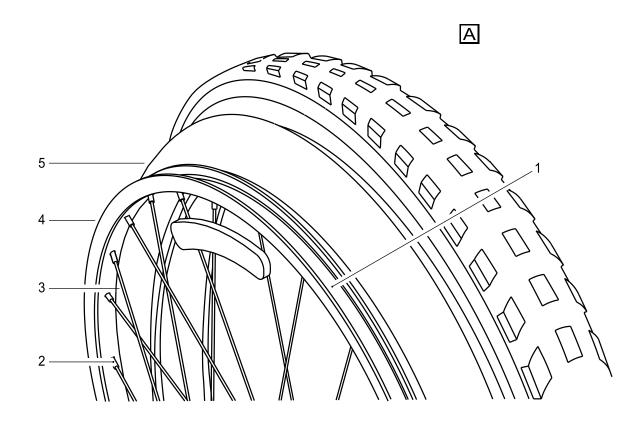

the tire
the tube
the spokes
the spoke nipples
the valve
the hub

On their own, the individual components are not very strong. But, when they are installed together, the components make the complete wheel (refer to Fig 1). The complete wheel is resistant to almost any type of heavy loads and operation.

ICN-C0419-S1000D0365-001-01

Fig 1 Parts of the wheel

### 1.1 Spokes

The spokes go out from the hub and go across and below each other. The spoke nipples attach the spokes to the rim with the threads on the end of the spokes. You can use the spoke nipples to adjust the tension of the spokes. The tension on each of the spokes must be equal.

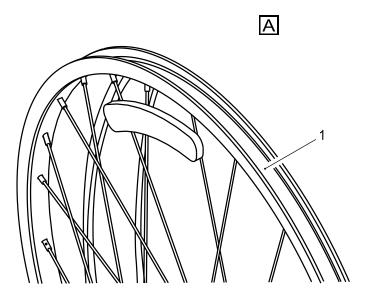

#### 1.2 Wheel rim

The rim (refer to Fig 2) of the wheel has a lining of rim tape. This tape protects the tube from damage that the rough edges on the spoke nipples can cause.

S1000DBIKE-AAA-DA0-00-00-00AA-041A-A

ICN-C0419-S1000D0366-001-01

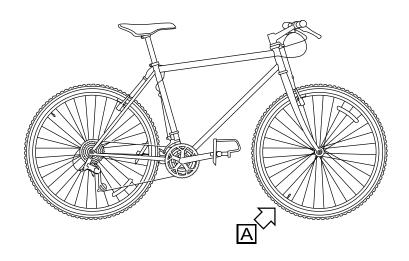

Fig 2 The tire and rim

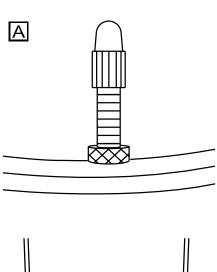

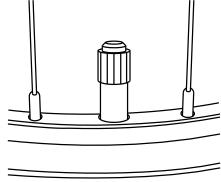

#### 1.3 Tube and tire

The tube and the tire install on the rim. The sidewalls of the tire have markings on them. These which are used to indicate the correct direction of rotation. The markings also make sure the tire installs on the rim and that the directional arrows points in the correct direction. You install the tube into the tire before you inflate it. The tube has a valve (refer to Fig 3) which you put through the hole in the rim. This valve (refer to Fig 3) is used to inflate the tube and the tire to the correct pressure. A dust cap installs on the valve (refer to Fig 3) to prevent damage that dust and debris can cause

ICN-C0419-S1000D0367-001-01

## Safety conditions

None

#### **Procedure**

- 1 Locate the valve stem of tire.
- 2 Use the tire pressure gauge (Tire pressure gauge) to check the tire pressure.
- Tire pressure should between 2000 hPa to 2700 hPa.
- 3.1 If tire pressure is less than 2000 hPa inflate tire. Refer to S1000DBIKE-AAA-DA0-10-20-00AA-215A-A
- 3.2 If the tire cannot maintain pressure or the tire pressure is greater than 2700 hPa replace the inner tube. Refer to \$1000DBIKE-AAA-DA0-10-10-00AA-921A-A

### Isolation procedure

- Use the tire pressure gauge (Tire pressure gauge) to do a check of the pressure What is the tire pressure reading?
- 1.1 More than 2700 hPa Step 2
- 1.2 Between 100 hPa and 2700 hPa Step 3
- 1.3 Less than 100 hPa Step 4

Produced by Docuneering Ltd.

2	Deflate the tire until the pressure is 2700 hPa
	Go to requirements after job completion
3	Inflate the tire as given in S1000DBIKE-AAA-DA0-10-20-00AA-215A-A
	Go to requirements after job completion
4	To do a check of the tire for damage
	Is there damage to the tire?
4.1	Yes: Go to Step 5
4.2	No: Go to Step 6
5	Replace the tire (refer to S1000DBIKE-AAA-DA0-10-20-00AA-921A-A)
	Go to requirements after job completion
6	Replace the inner-tube (refer to \$1000DBIKE-AAA-DA0-10-10-00AA-921A-A)
	Go to requirements after job completion

## Description

## 1 Brake system

The most important part of the bicycle is the brake system. Only a minimum maintenance of the brake system is necessary. But, when a problem does occur, make sure you to do the necessary maintenance as quickly as possible. If you do not do this the bicycle will be dangerous to use.

There are nine different types of brake systems. The one found on most bicycles is the cantilever brake (refer to Para 1.1).

#### 1.1 Cantilever brake

The brake system (refer to Fig 1) has these primary components:

the brake lever (refer to Para 1.3)

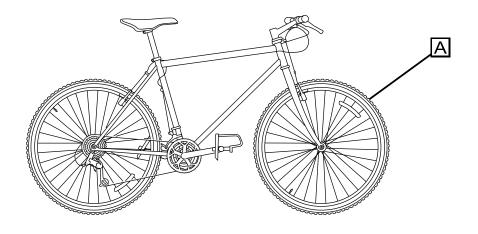

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

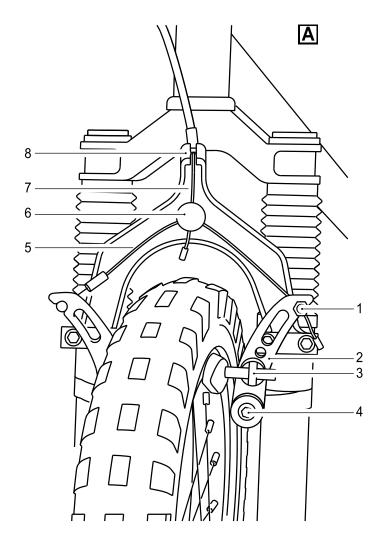

the brake cable the brake arm the brake clamp (also known as callipers) the brake pads (refer to Para 1.2)

S1000DBIKE-AAA-DA1-00-00-00AA-041A-A

ICN-C0419-S1000D0379-001-01

Fig 1 Cantilever brake with straddle cable

A cable that goes from the brake levers on the handlebars pulls the two levers on the brakes together. This presses the brake pads against the outer rim of the wheel, which decreases the speed of the bicycle.

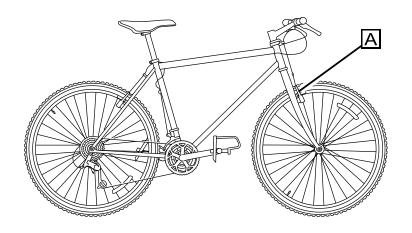

#### 1.2 Brake pads

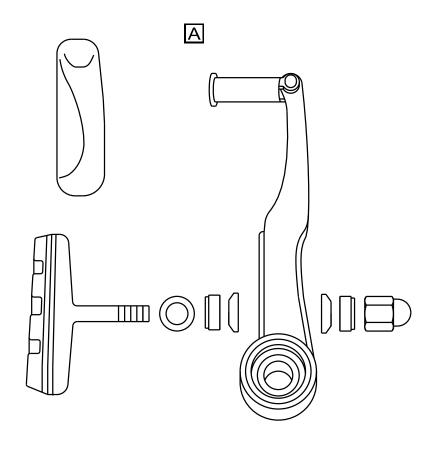

There are four brake pads (refer to Fig 2) on the bicycle. Two are found on the front wheel and two on the rear wheel. The brake pads are made out of hard wearing rubber. The pads press against the rim of the wheel to cause friction when the you operate the brake levers.

2016-12-31 Page 4

S1000DBIKE-AAA-DA1-00-00-00AA-041A-A

ICN-C0419-S1000D0380-001-01

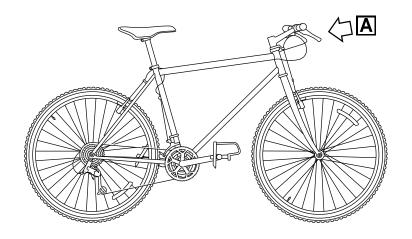

Fig 2 Exploded diagram of a brake

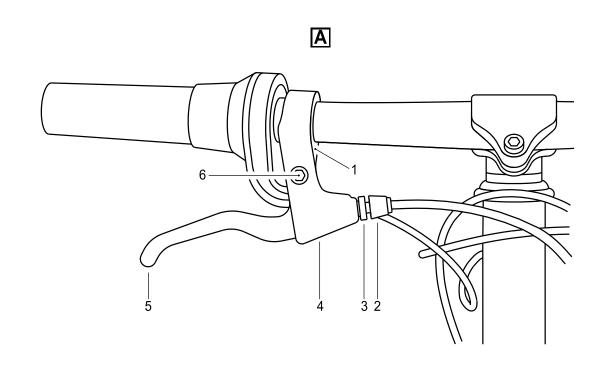

#### 1.3 Brake lever

The brake levers (refer to Fig 3) are easily damaged. The lever is installed in the mount. A clamp bolt holds the mount. This bolt is not visible because it is found in the mount. The lever turns on a lever pivot bolt. The adjuster lock nut holds the brake cable. This lock nut adjusts the tension of the cable.

ICN-C0419-S1000D0381-001-01

Fig 3 Typical components of a mountain bicycle lever

The left brake lever holds the brake pads on the front wheel and the right brake pads hold the brakes on the rear wheel.

## Description

## 1 Steering

The steering on the bike is what enables the bike to manoeuvre in a given direction during travel. The steering system on the bike is made of three parts, they are:

Para 1.1 The handlebar Para 1.2 The headset

Para 1.3 The stem

#### 1.1 Handlebar

This consists of a horizontal bar attached to the stem with handgrips at the end. Brake levers and shifters are also attached to this bar although they do not have any part in the steering mechanism. The handlebars manoeuvrability is a sideways swivelling action. The handlebars themselves do not provide this swivelling, the headset (also known as the steering tube) is the mechanism that enables the handlebars to swivel.

#### 1.2 Headset

This mechanism is situated in front of the frame and connects the front fork to the stem and handlebars. The headset allows the handlebars to swivel left and right for steering purposes.

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

For a full description of the headset, refer to S1000DBIKE-AAA-DA2-30-00-00AA-041A-A.

#### 1.3 Stem

The stem is a piece that attaches the handlebar to the steering tube. Basically the stem is just a threaded stem bolt situated inside the steerer tube and is what attaches the handlebars to the headset.

# Steering

Description of how it is made: Knowledge Check

This is a "learning" Data Module

The Docuneering S1000D XSL-FO Stylesheets do not yet support the "learning" Data Module

#### **WARNING**

Do not ride the bicycle until the grips have become dry and are firmly held in position. If the grips are wet, your hands can move off the grips when you ride the bicycle.

# WARNING Do not ride a bicycle with no grips on the handlebar. CAUTION Make sure the handlebar is correctly aligned in the center of the stem.

#### **Procedure**

- Put the Handlebar in the stem and tighten the clamp bolt with a Set of Allen wrenches. Make sure the handlebar is correctly aligned in the center of the stem. Tighten the clamp bolt.
- 2 Put the Brake lever and Shifter lever on the handlebar.
- 2.1 Move the Shifter lever on the Handlebar again and make sure you do not catch the cables.
- 2.2 Tighten the clamp bolt.
- 2.3 Move the Brake lever mount and the brake lever on the Handlebar again.
- 2.4 Tighten the clamp screw.
- 3 Replace the Handlebar grips.
- 3.1 Apply with the Extra firm hold hairspray to the Handlebar grips area of the Brake lever mount.
- 3.2 Before the Extra firm hold hairspray becomes dry, move the Handlebar grips into the correct position. Make sure the grip protects the end of the Handlebar or install a Handlebar plug.

# Description

#### 1 Headset

The headset (refer to Fig 1) is a pair of bearings on the two ends of the head tube of the frame. These bearings permit the fork to turn rearward and forward (for example, to let the rider turn the handlebars for the steering).

The headset (refer to Fig 1) includes the parts that follow:

The bearing races that push into the head tube a bearing race that pushes on the fork steerer tube an adjustable upper race two sets of ball bearings

A headset has cups that are pushed into the head tube and a ring on the fork. All three must be fully parallel. It is usually necessary to remove rough paint to get all three fully parallel.

The upper race installs onto the steerer tube with a thread. A locknut is used to safety the upper race.

A clamp bolt holds the stem to the steerer tube.

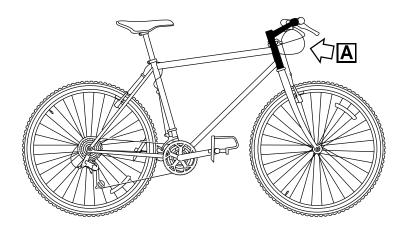

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

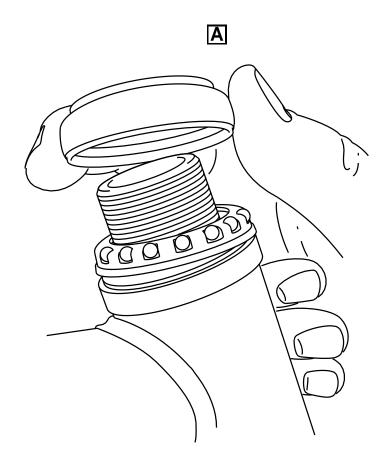

The fourth remaining bearing race is part of a nut that installs on the threaded top end of the fork. This is done after you install it in the head tube. It is sometimes necessary for some headsets to have more thread at the top of the head tube. If the fork is too long, the spacer rings can be installed. If it is too short, there is a limit to the number of headsets you can use.

For an illustration of the parts of the headset (refer to Fig 1).

# Description

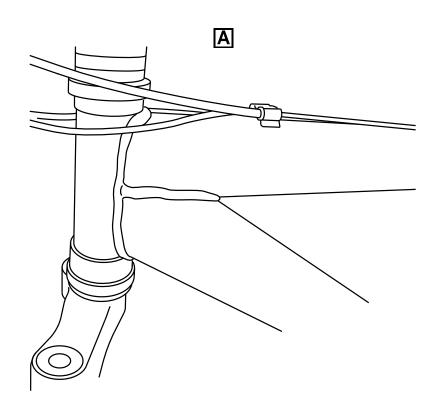

# 1 The bicycle frame

The frame is the skeleton, the primary part of your bicycle. Its structure makes the bicycle resistant to large forces.

The initial frames (refer to Fig 1) were tubes of aluminum or steel welded together.

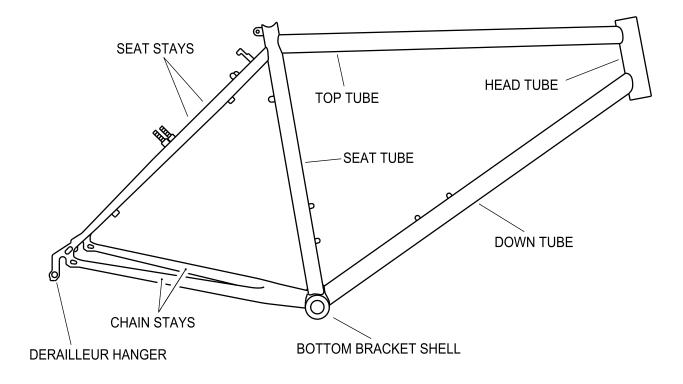

ICN-C0419-S1000D0394-001-01

Fig 1 Welded frame joints

Subsequent frames (refer to Fig 2) can be made out of a wide variety of materials, including aluminium, titanium, or chrome moly.

ICN-C0419-S1000D0393-001-01

Fig 2 Frame

Other Frames are different and can also be of different materials (for example, titanium or chrome moly). Some bicycle frames are of carbon fiber. To get this material, it is necessary to put sheets of carbon fiber cloth on foam forms and epoxy them in position. This procedure gives a very light, strong structure that can have different shapes.

The frame includes the parts that follow:

- the top tube (the higher bar of the bicycle frame)
- the down tube (the section of the frame that extends from the stem to the bottom bracket)
- the head tube (the part of the frame that the fork steerer tube goes through)
- the seat tube (the vertical part of the frame that is the rear of the front triangle and that is between the bottom bracket and the top tube)
- the seat stay (the tube that includes the distance between the seat tube and the rear dropouts)
- the chain stay (the tube that is the bottom part of the rear triangle)

## Description

#### 1 Drive train

The drive train is the group of components that are necessary for the operation of the bicycle. The drive train is the primary system for the movement of the bicycle. A typical drive train has the chain wheels, the chain, the pedals and the saddle.

Since the drive train has many components, it is necessary to do a regular maintenance. The drive train maintenance is easy and the users can disassemble and assemble each part of the drive train. Because of this, when one part is defective, it is possible to remove and replace it with a new one.

## Safety conditions

#### **WARNING**

Wet lube is a very dangerous substance. Do not get it onto your skin. Use it in a well ventilated area. If you swallow it seek immediate medical advice. If it gets into your eyes wash your eyes in clean water and seek medical advice.

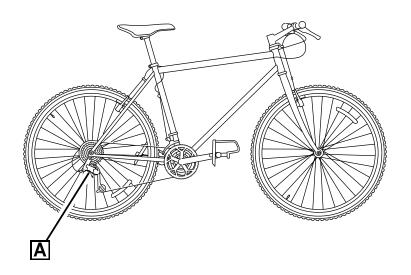

## Applicable to: Dry conditions **WARNING**

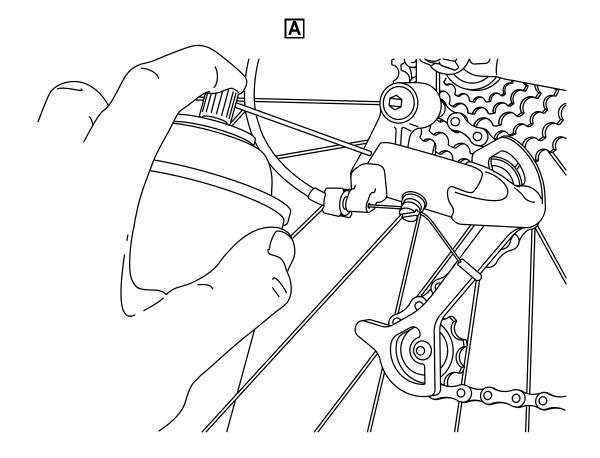

Dry lube is a very dangerous substance. Do not get it onto your skin. Use it in a well ventilated area. If you swallow it seek immediate medical advice. If it gets into your eyes wash your eyes in clean water and seek medical advice.

## **Procedure**

- Apply the penetrating lubricant into all the parts of the bike that 1 move
- 1.1 Apply Wet lube to:
  - derailleur pivots (refer to Fig 1)
  - derailleur tension (refer to Fig 2)

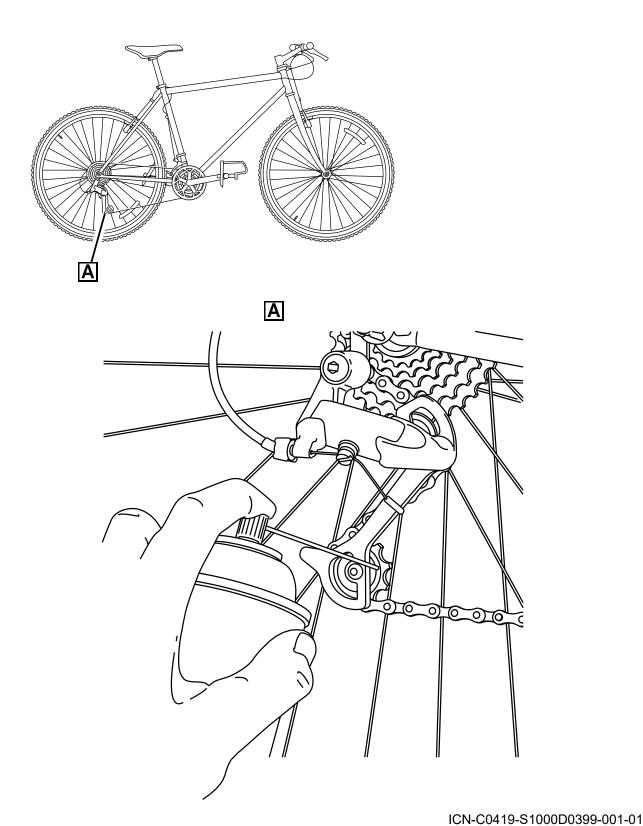

ICN-C0419-S1000D0398-001-01

Fig 1 Derailleur pivots

oion

Fig 2 Derailleur tension

## 1.2 Apply Wet lube to:

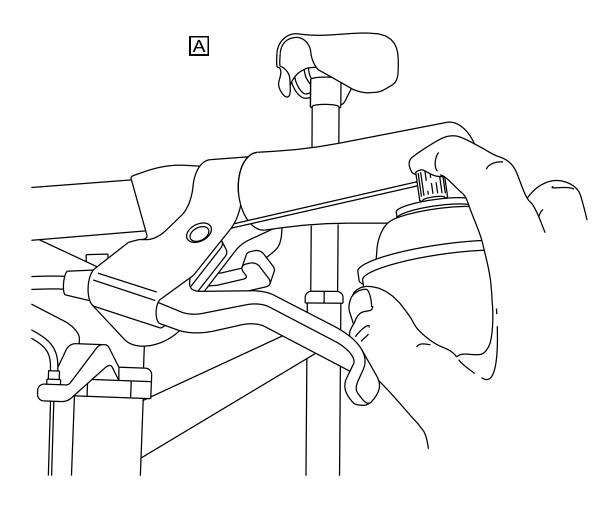

- brake lever pivots (refer to Fig 3)

These brake lever pivots include:

- derailleur pivots
- derailleur tension
- guide wheels
- brake lever pivots
- control cables and where they go into their casings

ICN-C0419-S1000D0383-001-01

Fig 3 Brake lever pivots

## 2 Lubricate the chain

- 2.1 Make sure the chain is clean and dry.
- 2.2 Put the Floor covering on the floor below the chain.

#### Applicable to: Dry conditions

2.3 Apply the Dry lube to each roller of the chain (refer to Fig 4) but only apply a small quantity.

#### Applicable to: Wet conditions

- 2.3 Apply the Wet lube to each roller of the chain (refer to Fig 4) but only apply a small quantity.
- 2.4 Hold the nozzle of the container above the front of the chain ring and slowly turn the cranks rearwards.

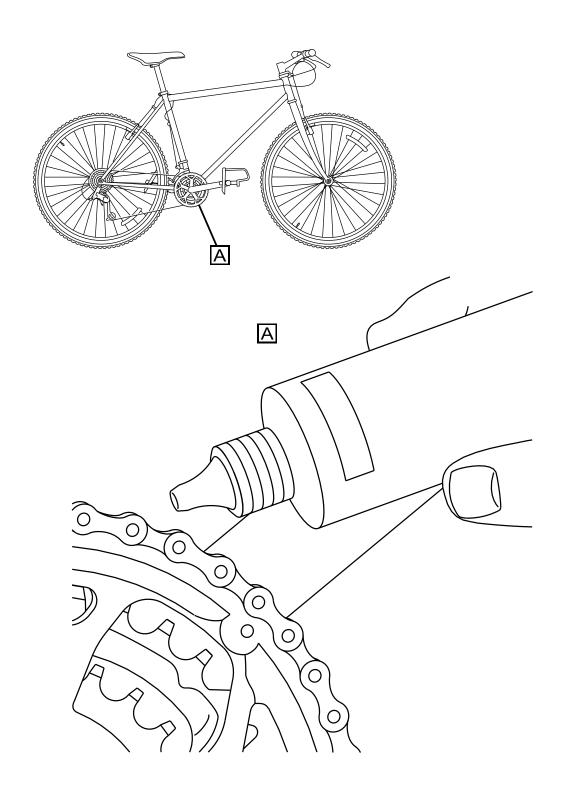

2.5

## **CAUTION**

Do not get lubrication oil into the brake system. Oil in the break system can affect the efficiency of the bake system. Do not get oil onto the floor where it can easily get transferred onto the brake system.

Let the lubricant soak into chain before you clean the unwanted lubricant from the chain.

ICN-C0419-S1000D0395-001-01

Fig 4 Lubricate the chain

## 3 Check lubricated parts

- 3.1 Do a check of the rear wheel rim and clean the unwanted lubricant if necessary.
- 3.2 Do a check of the chain to make sure that each link is lubricated. If there are links that do not move easily or have become frozen, lubricate the chain again (refer to Step 2).
- 3.3 Do a check of the remaining lubricated parts and clean the unwanted lubricant with a Clean dry cloth.

#### **Procedure**

- 1 Inspect the chain.
  - Do the inspection of the chain as given in the pre-ride checks (refer to S1000DBIKE-AAA-D00-00-00-00AA-121A-A).
- 2 Prepare the cleaning area.
- 2.1 Put the Floor covering on a satisfactory floor area.
- 2.2 Put the bicycle on the floor covering.
- 3 Clean debris from the chain.
- 3.1 Use the Stiff bristle brush and loosen as much unwanted material as possible.
- 3.2 Make sure that you remove all the unwanted material from the chain.
- 4 Clean the chain.
- 4.1 Open the Chain cleaning tool and fill with the Chain cleaning fluid.
- 4.2 Move the chain to the middle chainring and the middle sprocket at the rear.
- 4.3 Put the chain in the chain guides of the chain cleaning tool and lock the tool on the chain.
- 4.4 Hold the tool with the left hand and slowly turn the rearwards with the right hand.

4.5	Press the button on the cleaning tool to make sure that cleaning fluid flows until the tool is empty.
4.6	If necessary, remove the unwanted chain cleaning fluid.
5	Lubricate the chain.
5.1	Use the General lubricant and lubricate the chain.
5.2	Unlock and remove the cleaning tool.
5.3	If necessary, remove the unwanted lubricant.

S1000DBIKE-AAA-DA5-30-00-00AA-041A-A	Shifters - Description of how it is made

## Description

#### 1 Gears

The gears include the mechanism, the hubs and the shifters.

The description of the mechanisms is given in S1000DBIKE-AAA-DA5-10-00-00AA-041A-A

The description of the shifters is given in S1000DBIKE-AAA-DA5-30-00-00AA-041A-A

The bicycles of these days can have 27 gears or more. The mountain bikes use a set that includes:

- Three socket sprockets of different dimension on the front
- Nine socket sprockets of different dimensions at the rear

This set gives the gear ratios.

The shifters installed on the handlebars change the gears and operate the mechanisms (also known as derailleurs). These derailleurs are cable-actuated mechanisms. They move the chain from the different sprockets.

The hub is the center of the wheel and contains the axle and bearings.

The gears let the rider crank at the pedals at a constant movement on slopes of different angles.

# Description

### 1 Derailleur

There are two different types of derailleur, the front and the rear.

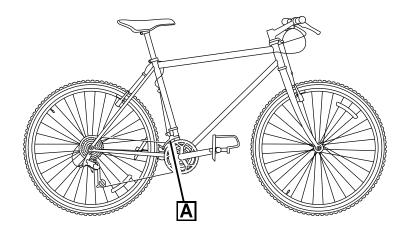

#### 1.1 Front derailleur

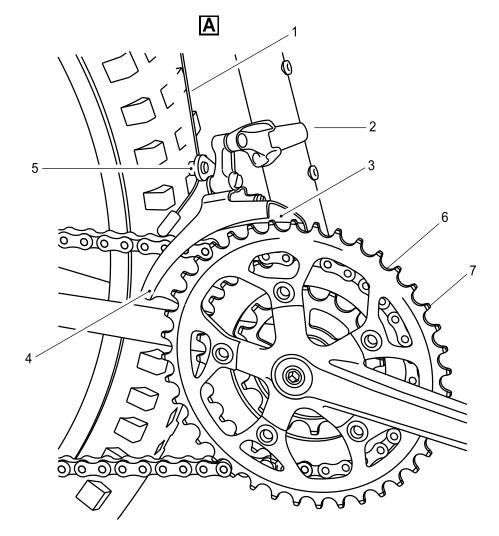

The front derailleur (refer to Fig 1) contains two types of screws to keep the movement of the derailleur to a minimum. These screws are:

the stop screw low-gear the stop screw high-gear

The function of these screws is to prevent the rider from over shifting . If this occurs, the chain will go out of the chain wheel.

ICN-C0419-S1000D0396-001-01

Fig 1 Front derailleur

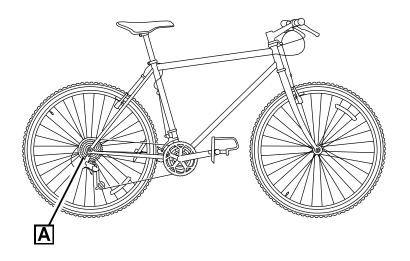

The derailleur is installed on the bicycle seat tube with a clamp and is parallel to the three front sprockets.

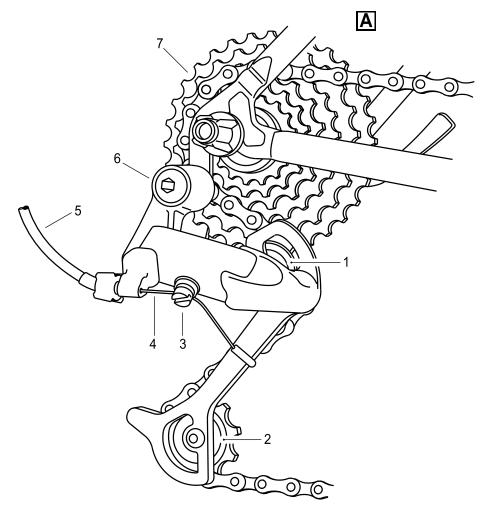

The shift cable is connected between the shifters on the handle bars and the cable clamp bolt on the front derailleur. This operates the derailleur. On the sprockets there is an inner and outer cage. The clamp attaches the cage.

#### 1.2 Rear derailleur

The rear derailleur (refer to Fig 2) section contains the sprockets for the different gear changes. When the cable clamp bolt is tight, it holds the shift cable in its position. A screwed bolt holds the tension wheel.

ICN-C0419-S1000D0397-001-01

Fig 2 Rear derailleur

The derailleur mounting bolt connects the derailleur to the frame. When the user attaches this bolt, this makes sure that the cage plates are parallel with the chain rings.

The guide wheel has the function to move the chain with the derailleur. It moves the chain from one sprocket to the other. The guide wheel must not move on its axis. If this occurs, there will be wear on the wheel. The position of the guide wheel is below the largest sprocket.

# Description

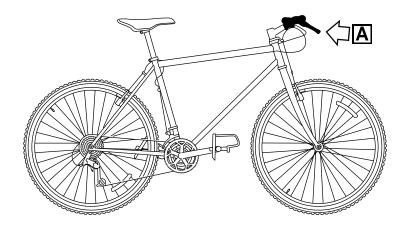

### 1 Shifters

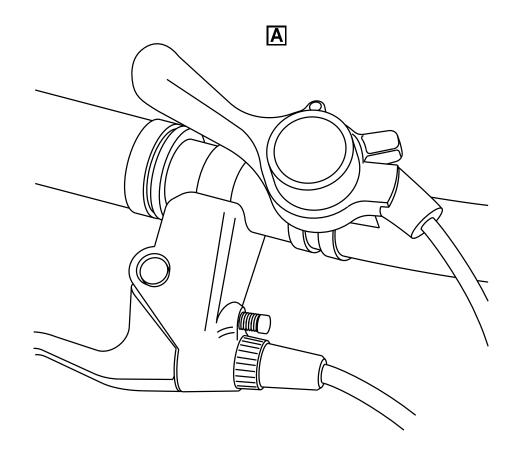

The thumb shifter is a usual type in modern bicycles. It is possible to adjust this type of shifter for operation in the index position or in the friction position. The differences between the two are:

- The index shifters change the gears with a click of a lever.
- The friction shifters hold the derailleur in its position by friction.

The thumb shifters (refer to Fig 1) are held on the bicycle with a screw. The paragraph that follows gives a description of a thumb shifter.

ICN-C0419-S1000D0405-001-01

Fig 1 Thumb shifter index type

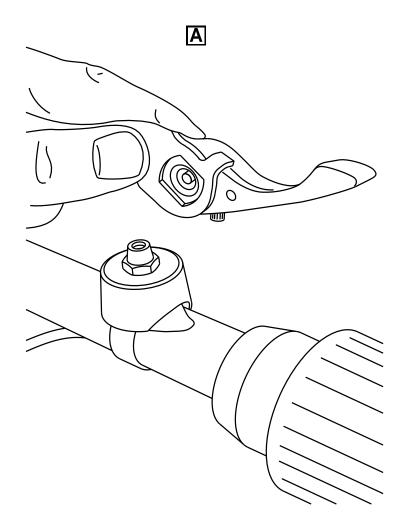

## 2 How a thumb shifter is made up

A wing nut (refer to Fig 2) from the top of the lever holds the thumb shifter. The lever is on top of the mount and the mount is on the handle bar with a nut. To remove the mount, it is necessary to loosen the nut of two turns (refer to Fig 3), then the mount can move from the handle bar from the top of the lever. The lever sits on top of the mount and the mount is fixed into pace on the handle bar by a nut.

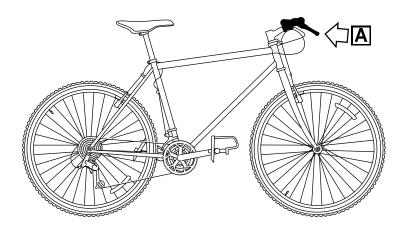

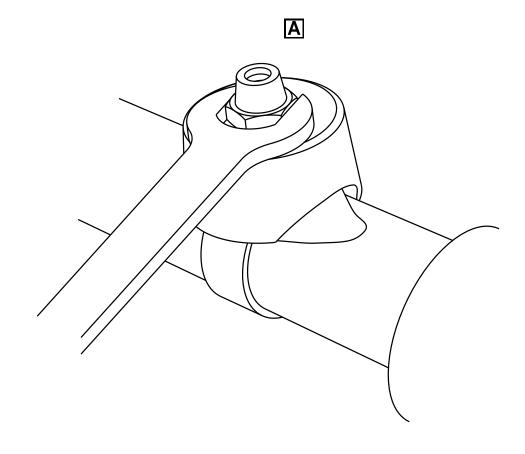

ICN-C0419-S1000D0402-001-01

Fig 2 Unscrew wingnut

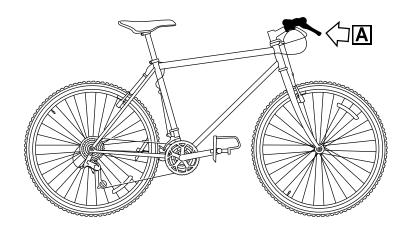

ICN-C0419-S1000D0403-001-01

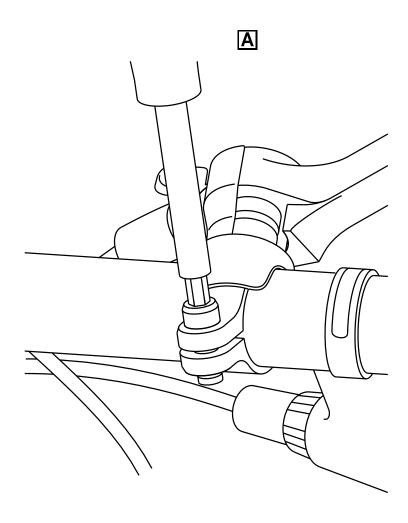

Fig 3 Loosen the nut

On modern models of this shifter, there is a clamp bolt that holds the shifter in its position (refer to Fig 4). The user can loosen the clamp bolt with an applicable tool. This lets the shifter release the handlebar.

ICN-C0419-S1000D0404-001-01

## Description

## 1 Brake system

The most important part of the bicycle is the brake system. Only a minimum maintenance of the brake system is necessary. But, when a problem does occur, make sure you to do the necessary maintenance as quickly as possible. If you do not do this the bicycle will be dangerous to use.

There are nine different types of brake systems. The one found on most bicycles is the cantilever brake (refer to Para 1.1).

### 1.1 Cantilever brake

The brake system (refer to Fig 1) has these primary components:

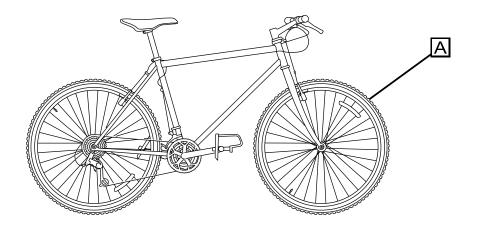

the brake lever (refer to Para 1.3)

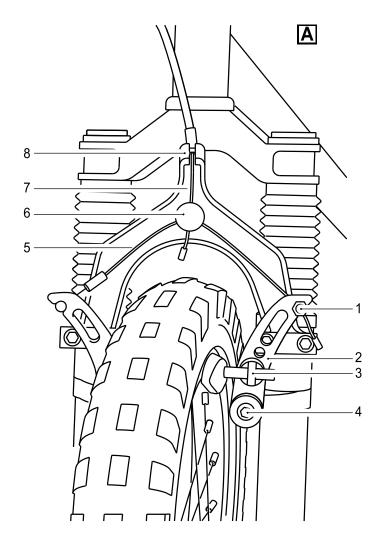

Applicable to: SerialNo: 0001~0008 and model: BR01

the brake cable the brake arm the brake clamp (also known as callipers) the brake pads (refer to Para 1.2)

ICN-C0419-S1000D0379-001-01

Fig 1 Cantilever brake with straddle cable

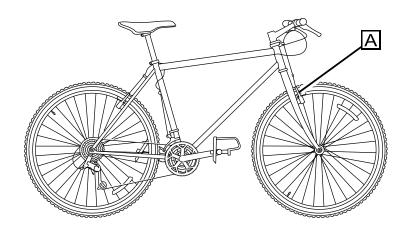

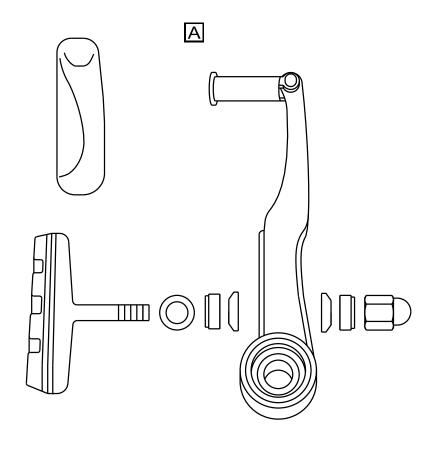

A cable that goes from the brake levers on the handlebars pulls the two levers on the brakes together. This presses the brake pads against the outer rim of the wheel, which decreases the speed of the bicycle.

### 1.2 Brake pads

There are four brake pads (refer to Fig 2) on the bicycle. Two are found on the front wheel and two on the rear wheel. The brake pads are made out of hard wearing rubber. The pads press against the rim of the wheel to cause friction when the you operate the brake levers.

ICN-C0419-S1000D0380-001-01

Fig 2 Exploded diagram of a brake

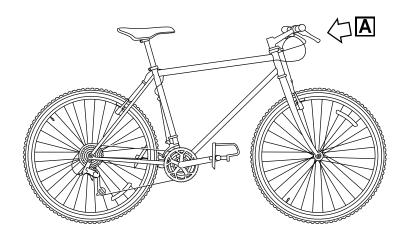

Applicable to: SerialNo: 0001~0008 and model: BR01

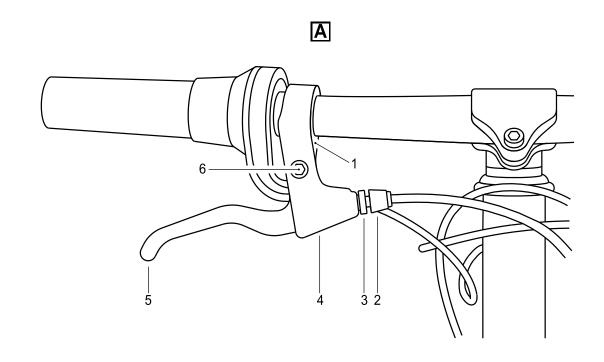

### 1.3 Brake lever

The brake levers (refer to Fig 3) are easily damaged. The lever is installed in the mount. A clamp bolt holds the mount. This bolt is not visible because it is found in the mount. The lever turns on a lever pivot bolt. The adjuster lock nut holds the brake cable. This lock nut adjusts the tension of the cable.

ICN-C0419-S1000D0381-001-01

Fig 3 Typical components of a mountain bicycle lever

The left brake lever holds the brake pads on the front wheel and the right brake pads hold the brakes on the rear wheel.

#### **Procedure**

- Do a visual inspection of the brakes as given in the pre-ride checks (refer to \$1000DBIKE-AAA-D00-00-00-00AA-121A-A).
- 2 Clean the brake pads.
- 2.1 Find each of the brake pads.
- 2.2 Apply a thin layer of the Rubbing alcohol on each of the brake pads.
- 2.3 Rub the surface until you have applied the Rubbing alcohol to the complete surface of the pad.
- 2.4 Remove the unwanted alcohol.

# Description

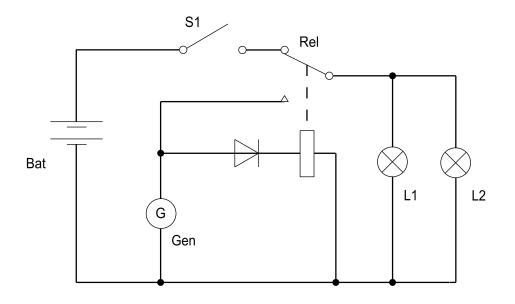

## 1 Lighting system

The illustration that follows (see Fig 1) shows the lighting system of the bicycle.

The lighting system is equipped with special high beam lighting. Do not use special high beam lighting when bicycling on roads during winter months.

The lighting system is faulty and will be replaced by 2013-03-15.

ICN-C0419-S1000D0392-001-01

#### **Procedure**

•	Impactor Zonoc.Zono Zoo ana Zono oco
2	Functional item S1 (ELO-Box)
3	Functional item ELO-Box
4	Remove the lighting system from the packaging.
5	Make sure that the components in the package are the same as those on the S1000DLIGHTING-AAA-D00-00-00-00AA-941A-D
6	Install the light bulb to the front and rear lights (refer to \$1000DLIGHTING-AAA-D00-00-00-00AA-921A-A).
7	Attach the front light fitting on the top of the handlebar.
7.1	Apply the protective strip around the handlebar.
7.2	Pull the clamp open and put it around the protective strip with the light connector at the top.
7.3	Install the washer on the screw.
7.4	Use the correct screwdriver from the and tighten the screw into the hole at the bottom of the clamp. This safeties the clamp to the handlebar.

8	Attach the rear light fitting to the rear triangle of the bike frame.
8.1	Apply the protective strip around one of the two rear triangle up-tubes.
8.2	Pull the clamp open and put it around the protective strip. Make sure the light connector points rearwards.
8.3	Install the washer on the screw.
8.4	Use the correct screwdriver from the and tighten the screw into the hole at the bottom of the clamp. This safeties the clamp to the tube.
9	Attach the light with the white glass to the front connector.
10	Attach the light with the red glass to the rear connector.

1 Make sure that the new bulb is not cracked.

### Safety conditions

#### **Procedure**

- 1 From location on the handlebars, remove the glass Glass.
- 2 Remove the used front yellow bulb Bulb.
- 3 Discard the used bulb Bulb.
- 4 Remove the new white bulb Bulb from the kit Kit.
- 5 Install the new white bulb Bulb.
- 6 Install the glass Glass on the light.
- 7 Attach the light fitting on the handlebar.
- 8 Apply the protective strip around the handlebar.
- 9 Install the washer on the screw.

10	Use the special screwdriver Screwdriver from the toolset Special Toolset and tighten the screw into the hole at the bottom of the clamp. This safeties the clamp to the handlebar.
11	From location under the saddle Remove the glass Glass.
12	Remove the used yellow rear bulb Bulb.
13	Discard the used bulb Bulb.
14	Remove the new white bulb Bulb from the kit Kit.
15	Install the new white Bulb.
16	Drill a 4mm hole in the middle of the glass Glass in order to allow venting and heat evacuation when the light is switched on.
	The glass with the hole may be ordered independently with the reference Glass.
17	Install the glass with the hole Glass on the light.
